GN

NIGHTPAPER 1.0

READY FOR
A GOOD NIGHT?

WE WISH YOU A

GOOD NIGHT.

We are the copers, seethers, all those who REEEEEEE for missing each airdrop. When they say GM, we say GN! The true \$GN token, which was 100% fair, launched with absolutely no presale, whitelist or team tokens; 50% of the liquidity was added to the supply, and 50% was burned upon launch.

Given all these keys to success, it will moon at night when gmrs are asleep.

The concept of \$GN came about as an idea to provide those who missed out on the \$ENS airdrop and various other pumps with a moonshot-esque opportunity.

This premise started \$GN. But for as much fun as this might be, we know that building a project needs more than memes and wojaks. Because of this, we intend to take radical steps forward.

And that's precisely what we are doing.

A WORLD YOU CAN DREAM.

THE NIGHTVERSE.

You may all have heard about *the Metaverse* at this point.

Yes, we know. It's quite a bit overused and even reading that word or any -verse kind of thing, makes your crypto-senses tingle. But do not worry, *we know*. We understand the frustrations that come with seeing or hearing buzzwords on every project's front page, only to see them fall short. We promise you; we will outperform all expectations.

"Sleep is essential. From daily mood and happiness to productivity and long-term health, sleep is fundamental to a life well-lived. Each person's sleep is different."

With night comes sleep; with sleep comes the extraordinary experience of a dreamscape. Drawing on the fascination of dreams and the endless imaginative experiences one can have, \$GN aims to partner with award-winning creators & artists to harness the full potential of a community lead-and-made digital playground.

A nightworld. But Bigger. *A Nightverse.*

We already hear you asking. "Wut? What's that, what's the difference?" We already told you, we want you to have a GN.

But what does GOOD actually mean, Anon?

YOU ARE GONNA HAVE A

GREAT NIGHT.

The concept here is pretty simple.

GOOD can be a nuanced word and expression, it can convey different meanings for different people.

What you may want, or need, is a *good night of sleep*, or -we hear you - a *good party night*.

What marks the difference in the Real World?

Well. *You do*.

So why not be able to decide what a good night is gonna be for you even in a virtual world?

And in a pure crypto fashion, why not be able to trade and earn some profits, while doing that?

FIGURE 01

A concept reference by Ilya Shapko as an example of what Nightverse DREAMS NFTs are going to look like.

WHAT REALLY IS A

METaverse.

"What's the difference with a common game?"

In short, a metaverse is (as defined by "Meta") the next evolution of social connection. Within the realm of cryptocurrency, one could bridge the concept of a network of always-on virtual environments with various collaborative measures and unique integration.

For instance, an ecosystem that encompasses various tokens, universal staking, MMORPGs, AR NFT experiences, and ultimately real-world integration. \$GN aims to realize the three critical components of what makes a metaverse tick: presence, interoperability and standardization.

FIGURE 02

Yes, of course you are gonna be able to swim with whales in the Nightverse.

THE METAVERSE'S

3 PRINCIPLES.

Presence ->

The feeling of being in a virtual space -> within the world of cryptocurrency feeling encompassed in our own blockchain through investment within an ERC-20 token (\$GN). Considering this is already a virtual space, heightening the sense of value and community through various efforts is at the forefront of our plans.

Interoperability ->

The ability to travel between virtual spaces seamlessly. Our Staking farms' development provides varying yet satisfying returns when one stakes GN tokens with other meme protocols. Furthermore, our AR+ NFTs (*inspired by the fantastic ECOMI NFTs*) will be able to be purchased with \$GN tokens at a discount.

Standardization ->

What allows interoperability of our services to occur across our metaverse. Our \$GN portal, which will be available at the end of Q1 2022, will seamlessly bridge all of our functions

BUILDING UP YOUR DREAMS IN

THE NIGHTVERSE.

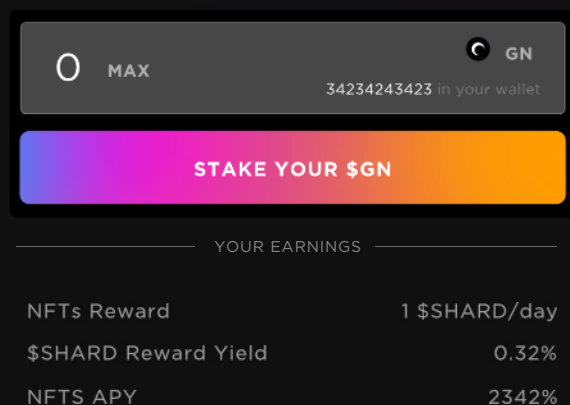

FIGURE 03

By Staking your \$GN, you are gonna be able to earn NFT \$SHARDS that you can use to build up your Dreams.

FIGURE 04

Don't worry we are keeping the wojaks.

Let's try keeping things real simple. We could say something like: this aims to be a sort Olympus Dao, but with NFTS.

But we'd like to explain the concept in simpler terms, that every crypto enthusiast is going to be able to understand:

- By staking your \$GNs in our platform (see figure 03 as a reference), you are going to earn a variable amount of \$SHARD NFTs every epoch.
- \$SHARDS are not ERC-20 tokens, they are ERC-1155 NFTs. They will be rewarded to stakers of \$GN every epoch. These \$SHARDS will be a random component that can be used to build DREAMS NFTs.
- The DREAMS NFTs created are all going to be unique. Users can either trade them, or collect and use them in the Nightverse.

(gn , gn)

THE OTHER JUICY

DETAILS.

TOKENOMICS ->

Token count: 1 trillion (50% token burn)

500 billion Circulating supply

3% Buy tax

15% Sell tax (to prevent dumping)

ROADMAP ->

- ~~50% Burn upon launch/Uniswap~~
- ~~CoinMarketCap and CoinGecko listings~~
- Influencer and celebrity partnerships
- 2000 telegram members and 4000 holders
- Pushing Discord membership
- Work on NFT collection and beginnings of an expansive Nightverse.
- Collaboration with fellow projects (shhh)
- ~~Initial CEX listings~~
- 10000 telegram members 6000 holders
- Early-stage release of Metaverse details and collaboration partners
- Continuous roll-out of partnerships and CEX listings
